

ShopLens — Dev Platform: URLs, Logins & Services Summary

Compiled 2026-06-18 from docs/local-setup.md, README.md, docs/status/2026-06-18.md, .firebaserc, and .env.example files. docs/local-setup.md is the most current/trustworthy source. No actual passwords or API keys are stored in this repo (they are gitignored, kept in a local-only github-secrets-dev file with the project owner).

GitHub

Item	Value
Repo	https://github.com/shoplensai-coder/shoplens (private)
Org	shoplensai-coder
Auth	Password auth over HTTPS is rejected — use <code>gh auth login</code> (browser device-code flow)
Environments/CI	No <code>.github/workflows/</code> exists yet — all deploys are manual gcloud/firebase CLI

Google Cloud / Firebase

Item	Value
Current GCP project	shoplens-dev-499700 (project number 935092313069)
Region	us-central1
Project owner (ask for access)	shoplens.ai@gmail.com — grants IAM in GCP Console + Firebase Console collaborator access
Firebase Console	https://console.firebase.google.com → project shoplens-dev-499700
Runtime service account	shoplens-runner@shoplens-dev-499700.iam.gserviceaccount.com
Firebase Auth domain	shoplens-dev-499700.firebaseio.com
Storage bucket (Firebase)	shoplens-dev-499700.firebaseiostorage.app

Note: Two abandoned earlier projects exist — shoplens-dev-prj and shoplens-dev-prj-ccf98 — superseded by shoplens-dev-499700 on 2026-06-18. Don't use them.

Cloud Run Service URLs (current, shoplens-dev-499700)

Service	URL	Public?
ai-analyzer	https://ai-analyzer-935092313069.us-central1.run.app	Yes
product-matcher	https://product-matcher-935092313069.us-central1.run.app	Yes
state-manager	https://state-manager-935092313069.us-central1.run.app	Yes
pubsub-worker	https://pubsub-worker-935092313069.us-central1.run.app	No — only Pub/Sub push subscription can call it

Note: infra/infra_status.txt is stale — it lists the same service names under project number 1017419148960, “last verified 2026-05-04”, deployed by aistreamscan@gmail.com. That's an older/different project, not the current one. Consider deleting or updating that file so it doesn't get confused with the URLs above.

Storage / Pub/Sub

Item	Value
HLS bucket	gs://shoplens-dev-hls-segments (public read)
Lens temp-image bucket	gs://shoplens-dev-lens-tmp (public read, 1-day lifecycle)
Pub/Sub topic	video-segments-topic
Pub/Sub subscription	video-segments-sub (push → pubsub- worker)
Firestore	Native mode, LiveShoppingSessions/{session_id} doc

Other / Third-party

Item	Value
SerpApi	Key was leaked in services/product- matcher/.env.example, scrubbed from git history, rotated. Current key lives only in github-secrets-dev, not in the repo. Force-push to scrub GitHub history is still pending per the 2026- 06-18 status notes.
Local dev frontend	http://localhost:3000
Local backend ports	ai-analyzer : 8081, product-matcher : 8082, state-manager : 8083, pubsub- worker : 8080

No actual usernames/passwords/API keys exist anywhere in this repo by design — for real credential values, contact `shoplens.ai@gmail.com` for the `github-secrets-dev` file contents.
